PROJECTS

Good Weather, Good Food, and Good Mood

seasons-of-food.github.io/whats-your-food-temp/

November 2021

- For this project, our goal was to give users weather data for a specific city along with a corresponding recipe depending on the temperature of the city.
- Users input a city name and select a mealtime (breakfast, lunch or dinner) in order to see the weather data.
- We used a combination of 2 APIs (one weather and one recipe API).
- Incorporated Foundation (CSS framework)
- Technologies used: HTML, CSS, Javascript, moment.js, JQuery

UnPuffd

unpuffd.herokuapp.com/

January 2022

- UnPuffd is a web application that allows users to learn about cannabis.
- Our site provided information on various cannabis strains and allowed users to leave reviews of their experience with a specific strain.
- Users need to verify age and are prompted to log in or sign up.
- There was no API for cannabis strains, so we had to seed the data in order to display it on the page.
- This app was deployed on Heroku.
- Technologies used: Sequelize, Heroku, MySql, Handlebars, express.js, express-sessions
